## DETAILED ACTION

### *Specification*

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.
2. The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.
3. The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.
4. The abstract of the disclosure is objected to because it exceeds 150 words.  
Correction is required. See MPEP § 608.01(b).

5. A substitute specification excluding the claims is required pursuant to 37 CFR 1.125(a) because the number of amendments render it difficult to consider the application.

6. A substitute specification must not contain new matter. The substitute specification must be submitted with markings showing all the changes relative to the immediate prior version of the specification of record. The text of any added subject matter must be shown by underlining the added text. The text of any deleted matter must be shown by strike-through except that double brackets placed before and after

the deleted characters may be used to show deletion of five or fewer consecutive characters. The text of any deleted subject matter must be shown by being placed within double brackets if strike-through cannot be easily perceived. An accompanying clean version (without markings) and a statement that the substitute specification contains no new matter must also be supplied. Numbering the paragraphs of the specification of record is not considered a change that must be shown.

### ***Drawings***

7. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: Reference numbers 11 and 111 cited in line 7 of page 4 in the disclosure are not shown in the drawings. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

8. Claim 1 is objected to because of the following informalities: a comma, --,--, should be inserted after the term "an inner cap element". Appropriate correction is required.
9. Claim 20 is objected to because of the following informalities: "plates" in line 3 should be --plate--. Appropriate correction is required.
10. Claim 31 is objected to because of the following informalities: "sais" in line 2 should be --said--. Appropriate correction is required.

#### ***Claim Rejections - 35 USC § 112***

11. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

12. Claim 24 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
13. Claim 24 recites the limitation "the underside remote" and in line 3. There is insufficient antecedent basis for this limitation in the claim. Figs. 1 & 2 depict the outer circumferential region of the sealing diaphragm being disposed between an annular sealing seat and the over pressure valve body, also described in line 23 of page 6. What then is the underside remote of the axial compression spring?

#### ***Double Patenting***

14. Claims 17-32 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-11 of copending Application No. 10/312,600. Although the conflicting claims are not identical, they are not patentably distinct from each other because they embody the same scope of invention substantially.

15. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
